PROFESSIONAL SUMMARY

I'm an infrastructure engineer working in DevOps and SRE, looking after business-critical 24/7 production environments on Kubernetes, Linux and AWS. My job is to keep the platform stable and secure: troubleshooting clusters, upgrading production with zero downtime, strengthening security from workload hardening to Zero Trust access, and keeping the environment observable. I automate repetitive work with Terraform, GitOps and Python, and I use AI every day to write code and speed up troubleshooting. Today I own the company's platform end to end, from reliability to security documentation.

PROFESSIONAL EXPERIENCE

Smartrips | DevOps Engineer / SRE Oct 2024 - Present

- Focal point for infrastructure, security and incident response for the production platform on AWS.
- Provision the entire AWS infrastructure with Terraform (EKS, RDS, ElastiCache, SQS, S3, KMS, IAM, CloudFront, Route53, SES and ECR) as versioned modules.
- Administer multiple Amazon EKS clusters, including zero-downtime production upgrades (API compatibility and add-on validation) and troubleshooting of events, pods, HPA, resource limits and Linux nodes under load.
- Built the observability stack with Prometheus, Grafana, Loki, Tempo and OpenTelemetry (distributed tracing), with PromQL dashboards for SLIs/SLOs, latency and resource usage.
- Run GitOps with FluxCD and Helm for declarative environment state, and CI/CD pipelines with GitHub Actions.
- Use AI tools to write infrastructure code and automation (AI-assisted coding) and to troubleshoot incidents.
- Led vulnerability remediation, bringing container image and AWS resource findings to zero with recurring Trivy scans and base image updates.
- Harden workloads via securityContext (non-root, no privilege escalation, dropped capabilities, read-only filesystem, seccomp) and enforce least-privilege RBAC per team in Rancher.
- Retired the VPN in favor of ZTNA with Cloudflare Zero Trust and WARP (identity-based, per-application access), and manage Cloudflare DNS and edge with firewall rules and geoblocking.
- Protect and audit the AWS environment with GuardDuty, WAF, KMS and event tracking through CloudTrail.
- Own the company's security documentation and the Disaster Recovery strategy for production.
- Administer Google Workspace: user accounts, groups, sharing permissions and security policies.

iRede | DevOps Engineer Oct 2025 - Mar 2026

- Provisioned AWS infrastructure with Terraform using reusable, standardized and versioned modules.
- Developed and maintained CI/CD pipelines on Azure DevOps, automating build and deploy.
- Implemented AWS Lambda functions for operational automation and service integrations.

CI&T | DevOps Engineer (Bradesco project) Dec 2024 - Oct 2025

- Modernized infrastructure and DevSecOps pipelines for a financial institution in the regulated banking sector.
- Managed Infrastructure as Code with Terraform and deployed microservices to Kubernetes with Helm.
- Troubleshot and provided operational support for Azure Kubernetes Service (AKS) in production.
- Ran GitOps with Argo CD, keeping Kubernetes environments in sync with their configuration repositories.
- Implemented progressive delivery with Argo Rollouts (canary), lowering release risk for critical applications.
- Built CI/CD on Azure DevOps, GitHub Actions and Bamboo, with testing, vulnerability scanning and Python automation.

Farmácias Pague Menos | DevOps Engineer Aug 2023 - Nov 2024

- Sustained 24/7 production supporting more than 1,600 stores, focused on stability and incident reduction.
- Troubleshot incidents and handled support tickets from development teams in business-critical environments.
- Led change requests (GMUD) and overnight releases, with post-deploy validation and rollback plans.

- Managed Kubernetes clusters (Vanilla and EKS) in Rancher: troubleshooting, access control and workload operations.
- Operated an Istio service mesh, monitoring traffic, routing and service health through Kiali.
- Developed IaC with Terraform and automated AWS resources (API Gateway, SQS, SNS, S3) via CloudFormation in the pipelines.
- Reduced lead time by automating the Azure DevOps pipeline end to end, from code validation to Helm deployment.
- Implemented Canary and Blue-Green deployments for progressive, zero-downtime releases.

Instituto Atlântico | DevOps Engineer Nov 2022 - Aug 2023

- Administered Linux and Windows infrastructure, keeping production environments stable.
- Managed Docker containers and Kubernetes clusters, with infrastructure as code in Terraform.
- Built CI/CD on Azure DevOps with SonarQube static analysis and Python automation.
- Managed compute and storage for an AI project focused on medical report analysis.

Engineering Brasil | Data Scientist Apr 2022 - Oct 2022

- Developed a Python backend for computer vision: people, object and motion detection, HSV segmentation and Kalman filtering.

LAPISCO/IFCE | Backend Developer Mar 2022 - Jun 2022

- Built TypeScript APIs (NestJS, GraphQL) with authentication, authorization and unit, integration and E2E testing.

Polo de Inovação IFCE | Backend Developer Jan 2022 - Apr 2022

- Built Python backend services, with Git/GitFlow version control and containerized environments in Docker.

Dell Lead | Backend Developer Nov 2021 - Feb 2022

- Built Python APIs (FastAPI) with PostgreSQL, automated testing with Pytest and containerization with Docker.

EDUCATION

- Teaching Degree in Computing, Universidade Estadual do Ceará (UECE), expected 2027
- Technology Degree (Tecnólogo) in Computer Networks, Universidade Estácio, completed 2025
- Technical Degree in Internet Computing, IF Sul de Minas, completed 2024

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate, Amazon Web Services · Verify on Credly
- AWS Certified Cloud Practitioner (CLF-C02), Amazon Web Services · Verify on Credly
- Google Cloud Certified, Associate Cloud Engineer · Verify on Credly

TECHNICAL SKILLS

Cloud and IaC: AWS (EKS, EC2, RDS, ElastiCache, SQS, S3, Lambda, IAM, KMS, CloudFront, Route53, CloudTrail, GuardDuty), Terraform, CloudFormation

Kubernetes and Containers: EKS, AKS, vanilla Kubernetes, Rancher, Helm, Istio, RBAC, HPA, Docker, containerd

CI/CD and GitOps: Argo CD, Argo Rollouts, FluxCD, GitHub Actions, Azure DevOps

Observability: Prometheus, Grafana, Loki, Tempo, OpenTelemetry, PromQL, CloudWatch, SLIs/SLOs

Networking and Security: VPC, DNS, TLS, WAF, ZTNA (Cloudflare Zero Trust), Network Policies, IAM, securityContext, Trivy

Linux and Automation: Linux (administration and troubleshooting), Python, Bash, AI-assisted coding

LANGUAGES

Portuguese: native | English: professional working proficiency (technical conversations, meetings and technical writing)
